FORMAL COMPLAINT TO THE FEDERAL BUREAU OF INVESTIGATION (FBI)

TO: Federal Bureau of Investigation, National Threat Operations Center / Internet Crime Complaint Center (IC3)

VIA: tips.fbi.gov

DATE OF SUBMISSION: August 7, 2026

SUBJECT: Possible deprivation of rights under color of law (18 U.S.C. § 242); possible conspiracy against rights (18 U.S.C. § 241); possible concealment/suppression of evidence in judicial proceedings; possible fraud or improper claims related to foster care funded with federal funds (including Title IV-E / False Claims Act, 31 U.S.C. § 3729), minors in substantial danger of serious injury or death, Castaneda-Sandoval Case (San Bernardino County, CA)

I. URGENCY

This complaint is filed due to substantial and imminent danger to the life and physical integrity of four minors, especially Athena Castaneda (born September 25, 2021) and Elleonore Castaneda (born June 17, 2020), who, according to expert medical opinion, suffer from a serious genetic bone disease (FEO / TNFRSF11A variant) that causes fractures with minimal trauma, and other serious symptoms, and requires continuous specialized care.

Dr. Robert M. Bernstein, MD, FACE (endocrinologist, Stanford fellowship, 45 years of experience) concluded, to a reasonable degree of medical probability, that Athena and Elleonore's fractures were caused by congenital abnormality, not by abuse, and that both require immediate and continuous care directed by experts in metabolic bone disease (endocrinology) and orthopedics, among others. Dr. Eduardo Salazar Valenzuela, a medical genetics specialist certified by the Mexican Council of Genetics A.C., confirmed that the c.858G>T variant in the TNFRSF11A gene could explain the injuries present in the girls and that ruling out a bone fragility disorder must be a priority. Dr. Thomas J. Grogan, diplomate of the American Board of Orthopaedic Surgeons, questioned the basis of the abuse diagnosis by documenting that the metaphyseal corner fractures were no longer visible on follow-up and were likely never actual fractures.

To date, the complainant is not certain that the minors are receiving that care. They remain separated from their biological family; their exact whereabouts are unknown. Each day without investigation and without protective coordination increases the risk of fractures, deformity, hemorrhage, infection, and death.

PRIORITY REQUEST: treat this tip as a continuing threat to minors + possible fraud/abuse in the child welfare system with federal nexus; not as a private custody dispute.

II. COMPLAINANT

Name: César Adrián Sandoval Molina
